

# SALT LAKE DAILY HERALD.

VOL. XII.

SALT LAKE CITY, SATURDAY MORNING, AUGUST 27, 1881.

NO. 71

## SPECIAL ADVERTISEMENTS.

### LOST.

Last evening, on Main Street, about 7 o'clock, a small black mare colt, two months old. Please leave information at this office.

### HORSES WANTED.

A pair of Ponies, broke to harness, for which a reasonable price will be paid. Apply immediately at this office.

**FURNISHED ROOMS TO RENT.**  
Single or en suite, close to Main Street. Apply to S. W. Darke & Co., Real Estate Agents, 60 Main Street.

### WANTED.

**GOOD BUILDING ROCK** WANTED immediately by Morris & Evans.

### WANTED.

Furnace, Feeders and Laborers. Also one blacksmith. Apply at the Germania Smelter, or office in town.

### WANTED.

Thirty good rock men to work on the Railroad at Granger. Three dollars per day, cash. Transportation from Ogden to Granger furnished. Apply to Crismon & Weiler, Salt Lake City, or at Granger, CRISMON & WEILER.

### FIFTY MEN WANTED.

To work on the Denver and Rio Grande Railroad in Price River Canyon. For information apply to H. Wallace, grocery department, Jennings and Sons, or to A. G. Adamson.

### FOR SALE.

**SHEEP! SHEEP! SHEEP!**  
5,100 Stock Sheep,  
2,400 Mutton Sheep.  
Apply to PHILIP DUFFEY,  
Kelton, U. T.

**CASH, DOORS AND BLINDS** BUILDINGS, BRACKETS AND ALL SIZES OF WINDOW CLASS AT BOTTOM PRICES. LATIMER, TAYLOR & CO.

**RACING.**  
TWO DAYS' SPORT  
ON THE  
Salt Lake Driving Association Track.  
RACES TO TAKE PLACE  
AUGUST 26th and 27th, '81.

### FIRST DAY.

**FIRST RACE**—Three-Quarter Mile Dash.  
M. L. Cady names Ostrich.  
B. C. Hanley names Postale.  
C. H. Brown names In Bonita.  
C. W. Harrison names Duffer.  
**SECOND RACE**—Fours, Purse, \$100.  
M. L. Cady names Secret John.  
B. C. Hanley names In Bonita.  
C. H. Brown names In Bonita.  
C. W. Harrison names Duffer.  
**THIRD RACE**—Class Trotting, Purse, \$200.  
B. C. Hanley names In Bonita.  
C. H. Brown names In Bonita.  
C. W. Harrison names Duffer.

### SECOND DAY.

**FIRST RACE**—Half-Mile Dash, Purse, \$75.  
B. C. Hanley names In Bonita.  
C. H. Brown names In Bonita.  
C. W. Harrison names Duffer.  
**SECOND RACE**—Class Trotting, Purse, \$200.  
B. C. Hanley names In Bonita.  
C. H. Brown names In Bonita.  
C. W. Harrison names Duffer.

### CONDITIONS.

The above Trotting and Pacing Races to be held on the Salt Lake Driving Association Track, commencing at 10 o'clock a.m. on August 26th and 27th. Entries to close at 5 o'clock p.m. on the day preceding the race. All drivers to be licensed by the association. All drivers to be licensed by the association.

**H. PUZEY,**  
CARRIAGE & WAGON SHOP.  
Blacksmithing.  
One door West of Barn, Wagon Depot, 1125.

**MULIGY & PAUL,**  
Proprietors  
SALT LAKE  
LIVERY AND SALE STABLES.  
And Carriage Line.  
24 to 26 SPRING ST. SOUTH STREET.  
All Orders left at Home promptly Attended to.

**HOT DINNERS**  
From 12 to 2 p.m. 25c.  
Coke, 10c. Soda Water, 10c.  
Cream.  
**LENCH FUTURE STRAWERS.**  
**J. MACFILL'S,**  
Opposite Theatre.

## LATEST TELEGRAMS.

### ANOTHER DAY OF LIFE.

But it Brings the President Nearer the End.

The Patient Grows Weaker and the Symptoms are Worse.

Only Faint Glimmers of Hope.

### MUTE SYMPATHY.

Boston, 25.—Deaf mutes, who are greatly interested in the President on account of his former interest in them, sent him, to-day, a message of sympathy.

### DR. AGNEW.

Philadelphia, 25.—Dr. Agnew returned from Washington to-day. He declined to be interviewed. In reply to the question whether it is true that the glandular swelling in the President's throat resulted from fever produced by septicemia, and that upon the patient's power to recuperate from exhaustion produced by fever would depend his recovery, the doctor replied: "That is the whole case." He declined to predict what would be the result.

### THE END NEAR.

New York, 25.—It is conceded by all journals that the situation at Washington is grave. The Sun has the following from that city at midnight: "One who is in a position to know, says that the pus is no longer of a healthy character, but has become thin and watery; that it is the exception now when the President's mind is clear, and that for the greater part of the time it is clouded; that there is hardly a possibility that he can live, and that the end, it is to be feared, is not further off than Saturday or Sunday. He has vitality enough, it is believed, to last at least forty-eight hours."

It has been learned to-night that Mrs. Garfield has not, until this afternoon, realized that the President was in a low state or that it was possible that he would die. She was very much overcome when informed how very low he was, and that physicians feared the worst. It has been decided if the President is not considerably improved in the morning, to notify the children and other members of the family of his serious condition.

### NO CHANGE.

Washington, 26.—Executive Mansion, 4 a.m.—No noticeable change has occurred in the President's condition during the last hour. He is now asleep. The physicians are doing and the members of the family are still asleep.

### RESTLESSNESS.

Executive Mansion, 6:15 a.m.—Physicians and attendants cannot yet be seen, but from the best information obtainable at this hour it is believed there has been no decided change for the better since midnight. The President's sleep during the night was frequently interrupted by intervals of restlessness.

### DR. REYBURN.

Executive Mansion, 7 a.m.—Dr. Reyburn says this morning that no material change in the condition of the President has occurred during the night. He observes no diminution of strength nor increase in the frequency of the pulse, which this morning is about 110. An increased discharge of pus from the parotid swelling took place during the night.

### MORNING BULLETIN.

Executive Mansion, 8:30 a.m.—The President slept most of the night awakening at intervals of half an hour to an hour. On first awakening there was, as there has been for several nights past, some mental confusion, which disappeared when he was fully aroused, and occasionally he muttered in his sleep. The symptoms have abated this morning, as on previous days. His temperature is above the normal and pulse a little more frequent than yesterday morning. Pulse 103, temperature 99.1, respiration 17.

### (Signed)

D. W. BLISS,  
J. K. BARNES,  
J. J. WOODWARD,  
ROBT. REYBURN,  
F. H. HAMILTON.

### RETICENT DOCTORS.

But very little information was obtained direct from the physicians concerning the condition of the President this morning prior to the issuance of the morning bulletin. The absence of all reference, on the bulletin, to the general condition of the President and the parotid swelling, was at once noticed and commented upon by those waiting for it. The situation is considered by many as less hopeful than it was last night at midnight and by others as more so. Attorney-General McVeagh pronounced it as extremely critical, and when asked this morning how long he thought this suspense would continue he replied: "God only knows. Postmaster-General James and Secretary Hunt telegraphed to Thurston Weed that a gleam of hope at 10 a.m. comes from the surgeons. His symptoms are no worse and improvement is not impossible. Dr. Bliss came out of the surgeon's room about 9:30 this morning, and telegraphed to his wife that the President was a little better than last night."

In reply to interrogations he said the pulse this morning was less frequent, and that the parotid swelling had broken into the right ear and was discharging through that orifice. The patient's mind was clearer and he conversed rationally with the surgeons about the condition of the inflamed gland. He partook of food, which seemed to be grateful to him and his general condition appeared to be a little improved. The doctor expressed himself as hopeful that the swollen gland would be relieved by the discharge through the ear, and that he would pull through thereby without much change.

Executive Mansion, 10:40 a.m.—Secretary Kirkwood came out of the cabinet room a few moments since, and in reply to a question asked by the reporter of the Associated Press gave the following statement of the President's case as he understood it this a.m.: "I have never thought, he said, until last night that the President would die; but the information we received from the surgeons late in the evening was of such a character as to leave very little room for hope. The danger which then seemed most imminent was the danger of the absorption of unhealthy pus from the swollen parotid gland. The mental disturbance and the increased pulse seemed to indicate that this process of absorption had already begun, and that it was poisoning the blood and this was acting upon the brain and heart. Taking up a small egg-shaped piece of sponge which lay on the reporters' table he continued: "As I understand the case from what the surgeons told me, the President's right parotid gland is in some respects like this sponge. Everywhere through it there are little cells or pockets, in each of which there is an accumulation of pus. The incision which was made the day before yesterday pierced one of these pockets and released the pus which that particular one contained, but that did not drain the others, and in fact the others could not be effectually drained at this stage of suppuration by a single incision made anywhere. The fear last night was that the pus retained in these small cavities would become unhealthy, and as I before said, result in acute blood-poisoning. The doctors told us, however, last night, just before we went home, that they had not given up the hope of a favorable change during the night, and the surgeons think this morning that there has been such a slight change for the better as Dr. Bliss hoped for. The breaking of the suppurating gland into the cavity of the ear will, it is thought, afford more relief than could be given in any other way, and therefore regarded it as a favorable symptom. The discharge through that channel seems to be free and the pus is thus far of a healthy character, and the patient's mind this morning is clearer than late last night, showing that there has been no blood-poisoning of consequence from the gland as yet. Taking everything into consideration I think there is reason this morning for a little more hope."

Executive Mansion, 4 p.m.—Dr. Reyburn reports at 4 p.m. that the condition of the President continues extremely critical. There has been no marked change for the worse since noon, but the pulse is rather higher and feebler. His vitality seems very low. There is no apprehension of immediate death, but there is on the other hand nothing as yet to strengthen the faint hope of a rally which the surgeons still entertain.

### LINCOLN'S OPINION.

Secretary Lincoln, upon coming out of the cabinet room, this morning, was asked what he thought of the President's condition. Well, he said, there is just enough encouragement to think that the President will pull through, which I had up to last night that the President would pull through. From what the surgeons told us yesterday evening, I received the impression that the swollen parotid gland had very much the character of a severe and dangerous carbuncle, which was enough of itself to bring a well man very low, even if it did not cause his death. With this impression hope pretty much left me this morning. However, I feel again a little encouragement.

Upon what ground? Well, the inflamed gland, I am told, looks better than it did last night, and it is discharging quite freely through the ear. This the surgeons regard as favorable, and it seems so to be. I think, too, the general condition of the patient is a little improved to-day. His mind acts better and grasps ideas more readily than last night. Then there has been, this morning, none of the incoherence of speech which was then noticed. If he was getting worse I do not think this would be the case. Upon the whole, therefore, I think we are justified in feeling slightly more encouraged. The case is not entirely hopeless.

### DR. WOODWARD.

Doctor Woodward, upon being asked at 11 o'clock whether there was any reason to-day for increased hope, replied, there is certainly no reason for less hope. The pus is being drained quite freely from the inflamed gland and through the ear. Is there any danger that pus will find its way down the throat? I think not. Nothing but mucous has been found in the throat yet.

What do you hope most for to-day? We hope the incision made in the face and draining through the ear will take the pus from the gland. Blaine, who has just left the Executive Mansion, says the surgeon is still feeling a little more hopeful with regard to the President's case than they did last night, on account of the continued outflow of pus through the ear. The general condition of the patient, however, has not, he says, materially changed. During the morning the pulse has been fairly steady but is now a little higher than at 8:30.

### THE BAD GLAND.

Chicago, 26.—Inter-Ocean's Washington: Pus from the abscess in the President's face is now discharging itself from the right ear and not from the mouth. What was supposed to be the pus in the mouth is said to be a collection of mucous matter, which gives the patient considerable trouble. His throat is kept open by gargling, which causes a considerable expenditure of force. Physicians still cling to the hope that his strength will continue sufficient to carry him through. Softening of the gland lessens the tension of the skin on the patient's face and relieves him somewhat from pain.

### GLEAM OF HOPE.

Inter-Ocean's Washington: Dr. Hamilton says the physicians have a gleam of hope. This comes from the fact that the swollen gland is suppurating through the ear. A few days ago Hamilton said by lancing the gland it was thought the danger of suppuration through the throat could be avoided. It is presumed this ear suppuration is regarded as hopeful because the gland has not suppurated in the throat. It is reducing the nausea and strangulation.

### AN ENGLISH ESTIMATE.

London, 26.—The Lancet says: When it is borne in mind that in cases of starvation death supervenes when the loss of two-fifths of the original weight has occurred, the fact that President Garfield has lost eighty pounds is alone sufficient to excite serious apprehension. We cannot but regard the parotid swelling or abscess as of serious import. Although it would be exaggeration to speak of his recovery as altogether beyond hope, speedy improvement is necessary to avert the worst results.

Chicago, 26.—Inter-Ocean's Washington: The news from the sick room is of a more peaceful character. Dr. Bliss in particular is buoyant. He says the free discharge from the glandular abscess is a very hopeful sign, and if the stomach holds out, he believes the crisis will be passed. He says the general condition of the President is better to-day than yesterday.

Inter-Ocean's Washington: Attorney-General McVeagh has just left the White House. He says there is no change for the better in the President's condition. His pulse is up to 120 and there is no decrease in the swelling of the gland, which contains a great many small abscesses. The physicians are all in attendance upon the patient.

### CRITICAL.

Washington, 26.—At 1:40 Bliss told a reporter that the President's condition this afternoon was very critical. You may say alarming if you choose. I is as bad as at any time before. Not entirely hopeless, you understand, but very grave. He continues to take food about as yesterday, and the enemata have been resumed. His system seems to be given that way better than through the mouth. The parotid gland is about the same. In order not to disturb him we didn't remove the poultices this noon. I don't think there is much danger now from acute blood-poisoning through the pus in the glands. He is more likely to die of exhaustion. It is a question of endurance. There was very little delirium to-day. Mrs. Garfield who was with him all the time, noticed it only once this morning, and then only to a trifling extent. His mind is decidedly clearer than last night. He talks a little more rationally and knows what is going on around him. His mental condition is due to the condition of the brain which is not properly nourished. It is the effect of exhaustion. The clearer mind is a favorable symptom. His pulse is not higher now than at noon, which was the highest of the day. The character of the pulse has improved and that is more important than the rate of it. Mr. Garfield fully appreciates his condition. She has not shown the slightest weakness. If he dies it will probably be only from exhaustion.

### HALF UNCONSCIOUS.

Chicago, 26.—Inter-Ocean's Washington: The President is resting in a half unconscious state, sleeping and waking. He takes liquid nourishment at intervals. Dr. Bliss has veered round again since morning and is entirely despondent. In his opinion, as well as that of the other physicians, that three or four days will elapse before the President dies and that he will die a very slow death. Executive Mansion, 7:30 p.m.: At this hour Dr. Hamilton thinks the President is a shade better.

Chicago, 26.—Inter-Ocean's Washington: The evening bulletin is very unsatisfactory in that it gives no information. Drs. Hamilton and Bliss, who have just left the White House, said the patient's condition at 6:30 was just a shade better. The pulse and temperature had both fallen slightly. No information regarding the wound or swelling is now obtainable.

News' Washington: Notwithstanding the unfavorable aspect in the President's case, the city is remarkably quiet. For a week there has been a settled feeling of despair. No crowd has gathered about the White House gates as at the former crisis. The day bids fair to be one of terrible anxiety. The impression is that there must be a change for the better to-day, or the worst consequences must ensue. All conditions now demonstrate the effects of blood poisoning, and a decided reaction is the only hope. The secretion of pus always creates severe constitutional disturbances of the brain. The absorption of the President yesterday and last night shows the working of the vitiated blood. The question now is whether this can be overcome. It will be a miracle if it can, and it is the only hope. The patient may retain adequate nourishment to sustain him while the blood poison is being eliminated. How long that may take no one can tell. The chances are against this hope. Physicians, however, say it is within the possibilities, but the reaction must come soon. The President was very restless during the early part of the night, and when he did sleep it was for a few moments only. He made no effort to talk. All the members of the family kept their rooms during the night except Mrs. Garfield. She did not undress but lay down on the outside of the bed. Soon after 1 o'clock she heard the doctors moving about and went into the sick room with them. They found it necessary to administer nourishment and soon retired. Mrs. Garfield remained by the bedside until the President fell asleep and then returned to her room. General Swain relieved Mrs. Dr. Edison at 3 o'clock, and daylight found that Mrs. Garfield shared his vigil. She looked pale but as resolute as ever, and remarked to a member of the family who asked her how the President was: "He seems no worse."

Official Bulletin, No. 3.—Executive Mansion, 12:30 p.m.—At the morning's dressing of the President's wounds it was observed that pus from the parotid swelling had found its way spontaneously into his right ear through which it was discharging. Some pus was also discharging through the incision made into the swelling. His wound looks as well as it has done for some time past. His pulse and temperature, at present are higher than at the corresponding hour for some days. He continues to take, by mouth the liquid food prescribed. Nevertheless, we regard his condition as critical. Pulse 118, temperature 99.1, respiration 18. Signed by the physicians.

The noon bulletin rather alarmed, then relieved the intense anxiety which prevails at the Executive Mansion. The discharge of pus from the inflamed parotid gland through the ear, which was regarded this morning as a favorable change, and one likely to afford relief, has not thus far answered expectations. The symptoms of the patient continue urgent and alarming, and he seems to be gradually sinking.

Executive Mansion—Dr. Reyburn, just before the appearance of the evening bulletin, said, in his opinion, the patient had not lost any ground since 1 o'clock of the afternoon. It was feared, he said, at one time to-day, that the whole parotid gland would slough off in a suppurating mass, and if this should occur, the shock to the patient's system would almost certainly be fatal. Later in the afternoon, however, the appearance of the gland was more reassuring and gave ground for the hope that suppuration would be confined within the limits of a simple although bad abscess. The doctor said he could not yet bring himself to believe the President would die, although he appreciated fully the gravity of the situation. The vitality of the patient has been very low and it was questionable whether he could hold out much longer against the depressing influence of the suppurating gland. Nevertheless, if they could tide him over two or three days, and get the glandular complication under control, he would still stand a fair chance of recovery. Speaking of the President's general symptoms, Dr. Reyburn said the President should be a little quieter and has shown no further signs of fatal disturbance. He has continued to take food satisfactorily and slept a good deal in short naps. In other respects his general condition seems to be unchanged.

Executive Mansion, 6:30 p.m.—The President's condition has not changed materially since the last bulletin was issued. He continues to take by the mouth the liquid food prescribed, and occasionally takes nourishment by the rectum. At 11:30 a.m., the enemata were again given at regular intervals, as a means of administering stimulants as well as nutrition. They are retained without trouble. At present his pulse is

116, temperature 99.1, respiration 18.

BLAINE TO LOWELL, AT 10 P.M.

While the President has made no gain to-day, his loss of ground has been less, in the judgment of his physicians, than was feared last night. In this fact there is a slight feeling of encouragement or at least a ray of hope. Liquid food continues to be administered two or three times during the day. He has asked for nourishment and he has spoken intelligently and voluntarily throughout the day. His mind has been less affected than yesterday. The expected relief to the parotid swelling from the discharge through the ear has not been realized. The situation is one of great gravity and danger.

At this hour, 1:30 p.m., the President's pulse and temperature are high. The pulse is 118, temperature 100. During several hours last night the pulse was 120. In early morning it fell to 108. It is hoped the parotid swelling has found a slight release by the discharge of pus through the right ear. He continues to swallow liquid food in adequate supply, and he exhibits a tendency to continuous sleep or drowsiness. His physicians pronounce his condition critical.

Executive Mansion, midnight.—Information from the surgeons' room is to the effect that no noticeable change has occurred during the last hour. Physicians apprehend no serious change during the night.

Secretary Brown, in his note to the cabinet, stated that the swelling of the neck had broken inwardly, and was discharging through the mouth. This recalls Boynton's assertion that there would be no possible hope if it broke inwardly. Last night the physicians told the cabinet that unless there was a radical change for the better by the morning there would be no hope. There has been no change except for the worse. Mrs. Edison left the White House this morning, believing him dying. He was unconscious most of the night and it was impossible to arouse him. Mrs. Garfield sat on one side of the bed and Mrs. Edison on the other. At 6 o'clock the President roused a minute and suggested to his wife that she had better go to her room and rest. She asked to be allowed to remain awhile. He said: "Is it true we must be separated soon? Well, perhaps you had better stay then." He thereupon dozed again but breathing heavily. During the night there were indications of further stomach trouble.

New York, 26.—Vice-President Arthur was seen at his home, to-day noon. He has only received an official bulletin in regard to the President's condition. He has not been summoned, nor has he received any intimation to be in readiness to go to the capital; should he receive such a message, he would go on once. He refused to state what he thought of the President's condition, or its requirements, in relation to a vice-president.

Washington special: The President passed a restless night, but fortunately was unconscious, or rather wandering in his mind at all times. When asked he talked incessantly, but unintelligibly for the most part. Occasionally he would call upon some familiar name. Several times he lucidly himself in his Ohio home. The pulse and temperature continued high until near morning, when he slept at longer intervals. Mrs. Garfield remained near him at all watches of the night. At 3 a.m., on finding there was a prospect of greater rest for him, she went to bed.

The usual Tuesday evening prayer meeting last night, at the Christian Church, was a very solemn scene. Rev. Mr. Power presided, and while he spoke of the President's condition, souls were heard in every part of the little building. Prayers were made for the recovery of the President, and a meeting for the same purpose took place at noon to-day.
